

Chubb ADACS Security Management System

Chubb

In today's fast moving world, one of the most important aspects in safeguarding national or corporate security is information.

Security is a constant concern for any organisation. All businesses, enterprises and critical infrastructure sites are looking for the best solutions to protect every asset in the most effective way. Consider the vital importance in managing the safety aspects of your estate, such as controlling access, fire detection and suppression, or the monitoring of crowd behaviour.

Next, give some thought to the management of the building infrastructure, temperature and lighting levels, plant operation, power supplies and other ancillary systems. What about the business employees, their personal safety and location? Is it important for you to know where employees are and what they are doing?

Once you begin to appreciate the value of having a security platform, then partnering with the right organisation delivers long-term benefits. Chubb has established and maintained strong partnerships with many organisations applying the Chubb ADACS security software solution.

Chubb – a partner you can trust

A powerful and sophisticated software solution, Chubb ADACS is an information management system that collates data and security information from multiple channels, protecting an organisation's portfolio of assets that may be distributed over a wide geographical area. Chubb ADACS plays a crucial role in safeguarding people, vitally important information and property.

For those who demand the maximum benefit from their security management system, Chubb ADACS enables customers to mitigate potential situations, while operating from a single interface. Already installed in many businesses, with a diverse and demanding range of applications, Chubb ADACS plays a key role in safeguarding vitally important information and assets.

With important assets and people to protect, you need a reliable and responsive security system that can respond rapidly to any situation. The speed and simplicity of operating Chubb ADACS provides the operator with all real-time information, quickly and reliably.

Chubb ADACS key features:

- A single unified platform and user interface.
- Unique multi-monitored four-quadrant display allowing unparalleled visibility of your business and properties.
- Centralised monitoring from both local and remote sites.
- Dynamic 2D and 3D interactive mapping of your sites.
- Multi-tier architecture to deliver a true IP solution with events and CCTV accessed from remote sites.
- Tablet application which enables security personnel to access and control the system remotely.
- An adaptable system which allows small scale installation as well as larger infrastructure installations.

Design to delivery

Each Chubb ADACS solution is specifically designed to meet the customer's individual requirements. Chubb's in-house software, hardware and networking capabilities, combined with the ease of integration and flexibility of Chubb ADACS, means that your system can be developed to meet your changing requirements.

With the ability to integrate third party security and business systems and customer-led initiatives, Chubb ADACS is able to meet the most innovative and demanding challenges.

Consultancy

Highest industry standards and accreditation

Survey

Training and developing skills for your people

Design

In-house design, drawing and software development department

Integrate

Integration with the latest networked systems and existing legacy equipment

Install

Highly trained project managers and installation team

Commission

Successful commissioning of the system

Chubb ADACS applications

This flexible and integrated security management platform offers applications relevant to all your business and security applications.

It is available in many languages including English, French, Dutch, German, Finnish, Italian, Spanish and Arabic.

Mapping

Quickly view and open up events

Event list

View alarm notifications in a consolidated list

Quick camera

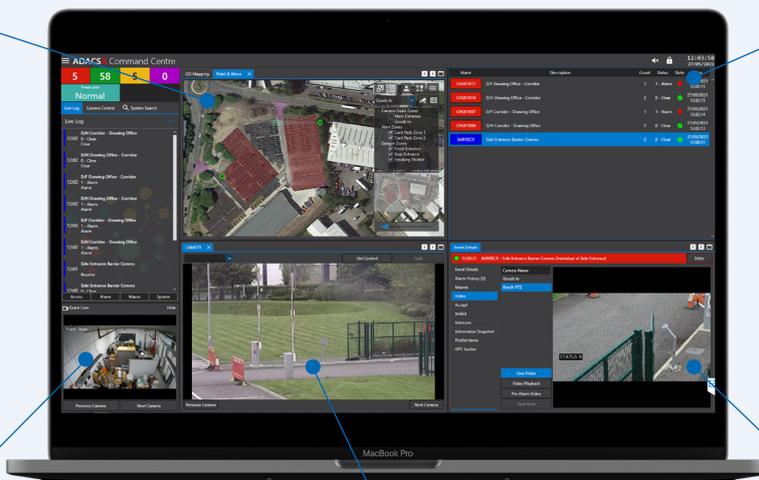

View multiple applications

Auditing

View reporting and auditing information

Event management

View alarm notifications in a consolidated list

Access control

An advanced access control application, with a feature-rich event management module and IP-enabled controllers which provide appropriate door access. Permissions are administered via the Chubb ADACS system giving direct control over access rights throughout your estate or property.

Cabinet Access Management System (CAMS)

CAMS provides a robust access and event management solution which ensures security by allowing only authorised personnel access to allocated cabinets. Complete with CCTV integration which enables video to aid readability of an alarm and a robust auditing capability for you to meet compliance requirements. This provides a safe and secure process for the management of your cabinets.

Fire and intrusion

Integrate your fire and intrusion panels, as well as central station receivers, to manage events.

Guard tour

The guard tour facility enables your security guards to patrol your premises, both inside and outside, safely and securely. It ensures that guards make their appointed rounds at the prescribed intervals, and provides alerts if any problems or incidents occur.

IP security applications

Integration with IP video management and access control systems enables organisations to respond quickly to changes in their security environment.

Key management

Chubb ADACS interrogates when an access card has been used to see if the user has access not only to a key safe, but also to which keys. This is a secure method of using access control to manage your keys.

Mapping

Manage your sites efficiently using dynamic 2D and 3D maps to view alarms, statuses and devices.

Muster

Enables controlled site evacuation by providing real-time data confirming who is within or off your premises, together with their current location.

Open Architecture

Wherever possible ADACSX supports open protocol communications with a sites existing hardware and software. Recent integrations include the ability to integrate OPC, BACnet, and ONVIF compliant systems. Where a traditional software integration isn't readily available, the Chubb Systems technical team have the skills required to create custom integrations with existing hardware.

Point and move

Chubb Systems have developed a new way of moving cameras quickly without the need of having to decide what camera is best for what situation. Users click on an area on their site map and the best possible camera is displayed on screen. They also can automatically view, and track GPS tagged assets around a site in real time using multiple cameras. Point and move minimises complications and enables customers to stay safe and protect their property.

Reporting

The powerful reporting facility collates, interprets and streamlines information about many aspects of your business to provide accurate reports for decision makers.

Video wall/Information display

The video wall is a powerful command and control interface which allows full visibility over mapping, video and geolocation. Up to 16 cameras or applications can be run in a number of custom displays.

Chubb support solutions

Chubb are experts at delivering unified platforms and provide the following support services:

Chubb services

Portfolio of services to enhance and support your Chubb ADACS system:

- Customisation services
- Remote managed services
- Risk consultancy

Support services

Chubb support provides the highest level of service to the customer at all times of the day:

- Training
- Technical support
- Software upgrade

Event detection

Event detection enforces event handling disciplines upon operators by ensuring that they are only presented with the information relevant to the situation at hand. Event prioritisation enables the highest priority incidents to be handled immediately.

A partner you can trust

At Chubb we are driven by a powerful purpose – to Protect Your World.

We deliver fire-safety and security solutions designed to make your world safer, healthier and smarter.

In the UK and Ireland, our 2400+ employees in 17 locations protect over 250k sites. Supported by a network of highly specialised engineers and 2 NSI accredited Alarm Receiving Centres.

We help you drive what matters most through a full range of planning, designing and installing systems that make your buildings safer and smarter. No matter the sector, project size or complexity.

But we don't stop there. Our service teams keep your systems and equipment in peak condition to ensure the safety and security of your premises, people and assets.

And through our connected remote services you can have complete confidence in your protection with more direct, immediate and easy connectivity with Chubb, 24/7/365.

Chubb, a partner you can trust.

The benefits of working with Chubb
